

Bad Design

Good Design

Comparison of Two User Interfaces (UI)

Below is a detailed comparison of the two UIs based on their design, functionality, and user experience:

Design and Layout

Feature	First UI (Image 1)	Second UI (Image 2)
Colour Scheme	Dark theme with shades of Gray and minimal highlights	Light theme with a clean white background and pastel accents
Visual Hierarchy	Compact layout with dense information blocks	Spacious layout with clear sections and better focus on individual elements
Typography	Basic font styles with limited visual emphasis	Modern typography with varied font weights for better readability
Icons and Graphics	Minimal icons; relies heavily on text	Rich use of icons and visual indicators for tasks, attendance, and announcements

Functionality

Feature	First UI (Image 1)	Second UI (Image 2)
Attendance Tracking	Displays overall attendance percentage at the top	Provides detailed attendance per subject with percentages and visual progress bars

Task Management	Dedicated "Tasks" section but appears empty	Includes pending tasks with deadlines and status indicators (e.g., "In Progress")
Announcements	Separate sections for active and old notices	Highlights recent announcements with timestamps for clarity
Exam Schedule	Tabular format for exam details	Integrated into the dashboard with easy access links
Navigation	Top navigation bar with dropdowns	Sidebar navigation for quick access to multiple modules

User Experience

- **First UI (Image 1):**
 - Compact but cluttered design may overwhelm users.
 - Limited use of visual aids makes it harder to quickly locate information.
 - Suitable for users who prefer a straightforward, text-heavy interface.
- **Second UI (Image 2):**
 - Clean and visually appealing layout enhances usability.
 - Clear categorization of elements makes navigation intuitive.
 - Designed for users who prefer a modern, organized interface with visual cues.

Overall Comparison

The second UI (Image 2) stands out due to its modern design, better organization, and improved user experience. It uses a light theme, intuitive navigation, and visual indicators that make it more user-friendly compared to the first UI's dense and text-heavy layout.
